

## *Embleton Care Recognised at National IT Awards*

October 30, 2007

Embleton Care was recognised at a gala awards ceremony in September at the Information Technology in Aged Care Conference. The conference is aimed at ensuring excellence in information technology adoption by the aged care sector and was attended by aged care providers, industry bodies, government officials and IT suppliers.

Embleton Care is one of the first adopters of a computerised care system that ensures the collection and dissemination of important information about residents and their individual care needs. The facility is currently working with software providers to provide a solution for aged care that will enable integrated software for residential care, human resources, quality systems and finance.

The integration of computerised systems will eventually lead to improved and more consistent care and free our trained nurses to spend more time with residents instead of writing at the desk.
